Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the

Habitat class	% Cover

Other Site Characteristics

Espacio marino situado al norte de la isla de Tenerife y conformado por la franja marina litoral que se extiende desde el Roque de Garachico hasta los roques de San Juan de la Rambla. Se trata de una zona marina expuesta a los vientos predominantes y a las fuertes condiciones meteorológicas marinas. En ella existen varios roques marinos y la costa aledaña está dominada por grandes acantilados, apareciendo algunos núcleos de población en los sectores más propicios.

4.2 Quality and importance

En el entorno del espacio marino existen varias colonias importantes de petrel de Bulwer (*Bulweria bulwerii*), pardela chica (*Puffinus assimilis*) y paño de Madeira (*Oceanodroma castro*). Además, también está presente la pardela cenicienta (*Calonectris diomedea*), y en zonas cercanas se reproduce la pardela pichoneta (*Puffinus puffinus*). El uso de las aguas incluidas en el espacio protegido se debe a las entradas y salidas de la colonia en los viajes a zonas de alimentación, presumiblemente distantes.
